## ABSTRACT

The Kudus Regency Regional Disaster Management Agency (BPBD) has the task of storing and distributing relief goods for disaster victims which of course requires a warehouse as a place to store these goods. In the warehouse management process, of course there are costs incurred. Based on these problems, this research aims to identify what costs arise in managing the Kudus Regency BPBD warehouse, costs that have the largest contribution and what costs can be reduced to minimize expenses. The method used in this research is a qualitative descriptive method. Data from this research was obtained through observation, interviews and analysis related to warehouse operations. The research results show that the costs incurred at the BPBD Kudus warehouse are procurement costs (78%), maintenance costs (0.3%), warehouse staff salary costs (19.7%) and distribution costs (2%). Procurement costs are the costs that have the largest contribution, namely 78% of the total costs at the BPBD Kudus warehouse, as well as costs that can be reduced, namely procurement costs in the form of non-food logistics and equipment.

## 1. Introduction

The Kudus Regional Disaster Management Agency (BPBD) is the institution tasked with handling disasters in the Kudus Regency area. Apart from that, BPBD Kudus is also tasked with storing and distributing disaster relief logistics. Therefore, BPBD Kudus needs a warehouse as a place to store these logistics. To ensure the availability of ready-to-use disaster logistics assistance, BPBD warehouse management is very important. One important aspect of BPBD warehouse management is cost control. Costs incurred at the BPBD Kudus warehouse include procurement costs, maintenance costs, labor costs and distribution costs. Kudus Regency BPBD warehouse managers have made several efforts to control warehouse operational costs. These efforts include carrying out regular warehouse maintenance to reduce maintenance costs and make savings in the process of receiving, storing and releasing goods. However, it is necessary to carry out further analysis regarding cost control, so this research aims to find out what costs arise at the BPBD Kudus warehouse, as well as knowing the costs that contribute, then it can help determine what costs can be reduced/eliminated so they are more efficient.

## **2. Theoretical Framework**

### **2.1. Cost**

Cost are sacrifices of economic resources calculated in monetary units in each period for certain purposes [1]. According to [2] costs are classified into 3, namely: fixed costs, variable costs, and semi-variable costs.

### **2.2. Warehouse Management**

Management is a process or that involves guidance or direction of a group of people towards real organizational goals [3]. while the warehouse is one of the storage facilities found in every company which aims to streamline the company's operational processes [4]. Based on this understanding, warehouse management can be interpreted as the process of managing storage areas carried out by a person/group with the aim of simplifying operations.

## **3. Method**

This research uses a qualitative descriptive approach. According to [5], descriptive research is a method that functions to describe or provide an overview of the object being studied through data that has previously been collected as it is, without carrying out analysis and making generally accepted conclusions. while qualitative is research that uses observation, interviews, analysis and other data collection methods to present responses to the subject's behavior [6].

Based on this understanding, qualitative descriptive research can be interpreted as research carried out using observation, interviews and data analysis methods to describe the data that has been collected.

### **3.1. Data collection techniques**

The data collection technique in this research is through: (1) observation, according to [7], observation is observing and recording everything that is visible on the object being studied. In this research, observations were carried out to observe the activities carried out at the BPBD Kudus warehouse, as well as to obtain data regarding the costs incurred. (2) Interview, according to [8] an interview is a meeting process between two people to exchange information so as to obtain the desired results and can be processed in research. In this research, interviews were conducted by interviewing the resource person, namely the head of the logistics and equipment management section of BPBD Kudus Regency. (3) Documentation, is a form of systematic activity in searching, using and providing documents to obtain knowledge and information [9].

### **3.2. Data analysis techniques**

The data collection technique in this research is through: (1) observation, according to [7], observation is observing and recording everything that is visible on the object being studied. In this research, observations were carried out to observe the activities carried out at the BPBD Kudus warehouse, as well as to obtain data regarding the costs incurred. (2) Interview, according to [8] an interview is a meeting process between two people to exchange information so as to obtain the desired results and can be processed in research. In this research, interviews were conducted by interviewing the resource person, namely the head of the logistics and equipment management section of BPBD Kudus Regency. (3) Documentation, is a form of systematic activity in searching, using and providing documents to obtain knowledge and information [9].

## **4. Results and Discussion**

The results of this research show that the costs incurred at the BPBD Kudus warehouse include procurement costs, maintenance costs, salary costs for warehouse staff, and distribution costs. Then the costs that have the biggest contribution and can be reduced are procurement costs.

### **4.1. Cost incurred at the BPBD Kudus warehouse**

(1) procurement costs, in the form of procurement of food logistics, clothing, shelter, equipment logistics and other logistics, amounting to IDR. 574,408,500. (2) maintenance costs, including maintenance of the electrical system and purchase of cleaning tools, amounting to IDR. 2,417,000.

(3) the salary costs for 6 warehouse staff are IDR. 144,900,000. (4) distribution costs in the form of purchasing fuel oil and vehicle maintenance amounting to IDR. 15,000,000.

#### 4.2. Cost that have the largest contribution

The following are the total costs at the BPBD Kudus warehouse

| No    | Type of Cost             | Total cost       | Percentage |
|-------|--------------------------|------------------|------------|
| 1     | Procurement              | IDR. 574.408.500 | 78%        |
| 2     | Maintenance              | IDR. 2.417.000   | 0,30%      |
| 3     | Warehouse officer salary | IDR. 144.900.000 | 19,70%     |
| 4     | Distribution             | IDR. 15.000.000  | 2%         |
| Total |                          | IDR. 736.725.500 | 100%       |

Table 1. 1 total and percentage of costs

The costs that have the largest contribution are procurement costs of IDR. 574,408,500 (78% of the total costs incurred at the BPBD Kudus warehouse).

#### 4.3. Cost that can be reduced

Cost that can be reduced are procurement costs in the form of non-food logistics (clothing and shelter) and equipment logistic.

### 5. Conclusion

Based on the results and discussion that have been described, it can be concluded that:

1. Costs incurred at the Kudus Regency BPBD warehouse are: Procurement costs, maintenance costs, warehouse staff salary costs, distribution costs.
2. The cost that has the largest contribution to the BPBD warehouse in Kudus district is the procurement cost of IDR. 574,408,500 (78% of the total costs at the BPBD Kudus warehouse).
3. Costs that can be reduced so that warehouse costs can be made more efficient are procurement costs.
